

What is Level 2?

Level II allows items that can normally only be found through a punchout session to display in the search results within a *Hosted Catalog*. Although the item cannot be ordered directly from the product search results, this option allows comparison shopping for hosted and punchout items and you can click on the link to go to the appropriate punchout site. When you click the link to go to the punchout site, you will arrive at the individual item from the search results.

How it Works!

1. Perform a search in the hosted catalog. (For our example, we will use 'soap') Click "Go"
2. Review the search results. Our search contains a vendor with a hosted catalog and (Fisher) Level II punchout results
3. Click on "Order from Supplier" and you will be routed to the Fisher Scientific punchout
